Java Full-Stack Developer with 2+ years of experience in Java, Spring Boot, React, and TypeScript, specializing in microservices, REST APIs, and scalable web applications. Skilled in OAuth2, Azure, Kubernetes, CI/CD, SQL, JUnit/Mockito, and Agile development, with experience building and supporting enterprise applications.

Technical Skills

- Languages: Java 17+, JavaScript, TypeScript
- Frontend: React.js, HTML5/CSS3
- Backend: Spring Boot
- Databases: SQL Server, Azure Cosmos DB, Apache Cassandra
- Testing: JUnit, Mockito
- Cloud services: Microsoft Azure
- Developer Tools: Git, GitHub, VS Code, Postman
- Additional skills: Logical thinking, Code Review & optimization, Problem Solving

Experience

Java Full-Stack Developer | Tata Consultancy Services

June 2024 - Present

Project: Contact Center Technology, Rogers Telecom

- Designed and developed microservices using Spring Boot for User and Group management, enabling seamless validation and association of users with groups through inter-service communication.
- Implemented user provisioning workflow by integrating backend services with Genesys Cloud APIs to create, sync, and manage users and groups in an external contact center system.
- Built secure service-to-service communication using Spring Cloud OpenFeign, ensuring user existence validation before group assignment and enforcing business rules like preventing deletion of groups with active users.
- Developed a centralized integration layer to handle OAuth2-based authentication, token management, and API communication with external systems, improving scalability and maintainability.
- Implemented robust exception handling, input validation, and logging across microservices and external API integrations, improving system reliability, troubleshooting, and maintainability in production environments.

Project: British Airways Booking Portal, British Airways

- Developed and enhanced the British Airways flight booking portal using Java, Spring Boot, RESTful APIs, React, and TypeScript, contributing to both backend services and frontend booking experiences.
- Implemented flight shopping journeys including One-Way, Round-Trip, and Multi-City flows, developing Spring Boot APIs for offer search, pricing, availability, and itinerary management and integrating them with React-based UI components.
- Developed booking servicing capabilities such as Flight Change, Flight Cancellation, and Order Modification, implementing backend business logic and corresponding React UI workflows for managing existing bookings.
- Built ancillary/extras functionality for Seats, Baggage, and Meals, integrating backend APIs with responsive React components to allow customers to add, modify, and manage extras throughout the booking lifecycle.
- Participated in the complete SDLC, including requirement analysis, development, unit testing, API integration, defect resolution, production support, and CI/CD deployments, while collaborating with cross-functional teams to deliver scalable full-stack features.

Achievements

- Delivered 20+ scalable features and RESTful APIs using Java, Spring Boot, Microservices, React.js, and TypeScript across enterprise applications.
- Improved API performance by 150–200 ms through backend optimization, efficient database queries, and caching mechanisms.
- Achieved 95%+ unit test coverage using JUnit and Mockito, improving code quality and reducing defects during Agile releases.
- Resolved 20+ production issues involving API failures, database deadlocks, and booking workflow defects through monitoring, debugging, and root cause analysis.
- Received Client Appreciation for timely delivery, proactive production support, and effective resolution of critical issues.

Education

Bachelor of Engineering in Computer Science and Engineering

Aug 2019 - May 2023

Theni Kammavar Sangam College of Technology, Theni, Tamil Nadu
